Refill All Correct Only Not Now

Quiz Instructions

PLEASE READ: Follow the format below when writing your answers. Otherwise, even if your answers are correct, it might not be considered by the auto-checker.

1. When writing your answers for S, E′, and M

For S, write **0** or **1** only

For E′, write all 8-bits, separated by space every 4 bits. For example: **0110 0101** or **100 1011 1100**

For M, write all significant bits, separated by space every 4 bits, can be ended with 0..0 (i.e., zero dot dot zero) for the padding. No need to write all 23-bits. For example: **1011 0..0** or **10 0..0**

2. When writing the normalized form, follow the format: pos/neg 1.M 0..0 x 2^E, where M is the mantissa and E is the exponent number. For example: **+ 1.101 0..0 x 2^4**

3. When writing the final IEEE SP and SP, put a space every 4 hex digits. For example: **ABCD 0000** or **40BC AFFF 0200 0000**

Question 1 1 pts

Given the values for S, E′, and M, identify the IEEE SP format in hexadecimal.

S = 0

E′ = 1000 0011

M = 1010 1101 0011 0..0

IEEE SP is [ans] h.

Question 2 3 pts

Given 9D94 6000h, identify the S, E′. and M.

S = 1

E′ = 0011 1011

M = 0010 1000 11 0..0

Question 3 7 pts

Given the decimal number + 0.09375, represent this in

(a) normalized form: + 1. 1 0..0 x 2^ -4

(b) S = 0 , E′ = 0111 1011 , M = 1 0..0

(c) IEEE SP in hex 3E000000 h

Question 4 1 pts

Given the values for S, E′, and M, identify the IEEE DP format in hexadecimal.

S = 0

E′ = 100 0011 0101

M = 1111 0..0

IEEE DP is [ans] h.

Question 5 3 pts

Given a number in binary - 11 0100.1000 1

Determine the values for S, E′, and M in IEEE DP format.

S = 1

E′ = 100 0000 0100

M = 1010 0100 01 0..0
